

CARE CARD

Super-Sod is here to help you get the most out of your beautiful Elite Tall Fescue lawn. Lawn care is simple and rewarding when you follow these steps.

USE SUPER-SOD PRODUCTS

WATERING

- 1" water per week; 2" in the heat of summer
- Water in the morning
- Water deeply for deeper roots, thus a stronger lawn

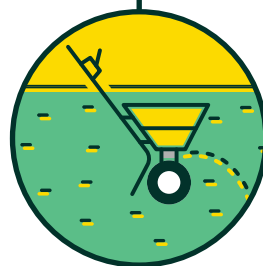

MOWING

- Height: Mow at 2.5 to 3" cutting height; taller to 3-4" in summer months
- Frequency: 5-7 days
- Mow off no more than 1/3 of the leaf at a time (to avoid scalping)

FERTILIZING

- Fertilize with a nitrogen blend when your lawn is green and actively growing during the cool months of October - April. Use a no or low nitrogen blend May - September.
- Lime only as needed, based on results of a soil test
- We recommend a yearly soil test

WEED & FUNGUS CONTROL

- Pre-emergent herbicide in February, April, September to prevent weeds*
- Post-emergent herbicide to weeds you can see, as needed
- Preventative fungicide monthly in May through August

*Restrictions apply to sod less than 4 months old - consult your local Super-Sod for advice.

COMPOST TOP DRESSING

- Soil³ compost - gives a boost of natural nutrients while improving soil structure
- Use Soil³ compost with fall overseeding for a lush, healthy lawn
