

TIFTUF™

CERTIFIED BERMUDAGRASS

CARE CARD

Super-Sod is here to help you get the most out of your durable TifTuf Bermudagrass lawn. Lawn care is simple and rewarding when you follow these steps.

USE SUPER-SOD PRODUCTS

WATERING

- 1" water per week is ideal
- Since TifTuf is drought tolerant, you can stop irrigating once the turf is established, and still maintain acceptable turf color and density through droughts
- Water in the morning
- Water deeply for deeper roots, thus a stronger lawn

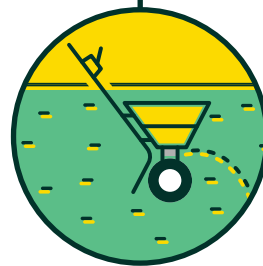

MOWING

- Height: .5 to 2"
- Frequency: 4-7 days
- Mow off no more than 1/3 of the leaf at a time (to avoid scalping)

FERTILIZING

- Fertilize when your lawn is green and actively growing in April through August
- Lime only as needed, based on results of a soil test
- We recommend a yearly soil test

WEED & FUNGUS CONTROL

- Pre-emergent herbicide in February, April, September to prevent weeds*
- Post-emergent herbicide to weeds you can see, as needed
- Preventative fungicide in October

*Restrictions apply to sod less than 6 months old – consult your local Super-Sod for advice.

COMPOST TOP DRESSING

- Level Mix – evens out bumps or depressions often found in new lawns
- Soil³ compost – gives a boost of natural nutrients while improving soil structure
